The screenshot displays the GitHub interface for the repository 'sdc-testing-competition' by 'christianbirchler-org'. The repository is public and has 7 stars, 8 forks, and 4 watchers. The main branch is 'main' with 1 branch and 12 tags. The repository contains several files and folders, including 'evaluator', '.gitattributes', '.gitignore', 'CHANGELOG.md', 'COMPETITION.md', 'LICENSE', 'README.md', 'competition.proto', and 'example.png'. The README section is visible, showing the title 'SDC Testing Competition' and tags for 'Python 3.11', 'discussions 15 total', and 'issues 5 open'. The repository is licensed under GPL-3.0. The right sidebar shows the 'About' section with a description: 'Tool Competition: Test Selection for Self-driving Cars in Simulation', a link to 'conf.researchr.org/home/icst-2025', and various tags like 'competition', 'tools', 'conference', 'software-engineering', 'regression-testing', and 'test-selection'. The 'Releases' section shows 11 releases, with the latest being 'v1.2.0' on Feb 12. The 'Packages' section shows 10 packages, including 'ml\_selector'.

# BENCHMARK

## SensoDat: Simulation-based Sensor Dataset of Self-driving Cars

### SensoDat: Simulation-based Sensor Dataset of Self-driving Cars

Latest Release on Zenodo: DOI [10.5281/zenodo.12600225](https://doi.org/10.5281/zenodo.12600225)

Original Paper Artifact: DOI [10.5281/zenodo.10307479](https://doi.org/10.5281/zenodo.10307479)

SensoDat is a dataset of self-driving car simulation data (30K executed simulations). Concretely, it contains:

- Simulation description data in [ASAM OpenDRIVE](#) format
- Sensor data as time series of 81 sensors/properties

- 32,580 Test Cases
- Generated by three test generators

# EXPERIMENTS

The experiments are conducted on a virtual machine (VM) with **16GB of RAM**, eight virtual CPUs.

# Results of SBFT Competition
